Accessibility Widget Shortcode Setup (WordPress)

Step 1: Upload the Script File

----

1. Rename your JS file to: AccessibilityWidget.js

2. Upload it to: /wp-content/uploads/custom-scripts/

   (Use FTP, File Manager, or WP File Manager plugin.)

Step 2: Add the PHP Snippet

Option A: Using WPCode Plugin

1. Install WPCode (formerly Code Snippets) from Plugins > Add New.

2. Go to Code Snippets > Add Snippet.

3. Choose 'Add Your Custom Code (PHP)'.

4. Title it: Accessibility Widget Shortcode.

5. Paste the following code:

```php
function render_accessibility_widget() {

   add_action('wp_footer', function () {

      wp_enqueue_script(

         'accessibility-widget',

         site_url('/wp-content/uploads/custom-scripts/AccessibilityWidget.js'),

         [], null, true

      );

   });

   return '<div id="accessibility-widget-placeholder"></div>';
```

}

add_shortcode('accessibility_widget', 'render_accessibility_widget');

6. Set to 'Run Everywhere', then Save and Activate.

Option B: Using functions.php (Advanced Users)

Paste the same code into: /wp-content/themes/your-child-theme/functions.php

Step 3: Add the Shortcode to Your Page

On any page or post where you want the widget to appear, add:

[accessibility_widget]

This will load the AccessibilityWidget.js script only on that page.
